3. Enables you to build complete, functional websites from scratch
4. Fosters confidence in creating responsive and interactive web pages

Getting Started with HTML

Basics of HTML

HTML (Hypertext Markup Language) is the backbone of every webpage. It structures content using elements and tags such as headings, paragraphs, links, images, and lists.

1. **Understanding HTML Tags:** Tags like `<h1>` to `<h6>`, `<p>`, `<a>`, `<img>`, `<div>`, and `<span>` define the content's structure.
2. **Creating a Basic Webpage:** Start with a simple skeleton, including `<head>` and `<body>` sections.
3. **Semantic HTML:** Use tags like `<header>`, `<footer>`, `<article>`, and `<section>` for better accessibility and SEO.

Best Practices in HTML

- Always use meaningful tags for clarity. - Keep your code well-indented and organized. - Validate your HTML code using online validators to ensure compatibility.

Styling with CSS

Introduction to CSS

CSS (Cascading Style Sheets) controls the visual presentation of your HTML content. It allows you to style elements with colors, fonts, layouts, and animations.

1. **Inline, Internal, and External CSS:** Understand different ways to apply styles and when to use each.
2. **Selecting Elements:** Use selectors like class (.class), id (id), and element names (div, p, h1) to target HTML elements.
3. **Box Model:** Learn how margin, border, padding, and content work together to shape elements.

Responsive Design with CSS

- Use relative units like %, em, rem, and vw/vh for flexible layouts. - Implement media queries to adapt layouts to various screen sizes. - Utilize Flexbox and CSS Grid for advanced, responsive layouts.

Best Practices in CSS

- Keep styles organized using external stylesheets. - Use meaningful class and ID names. - Minimize the use of !important to maintain code clarity.

Adding Interactivity with JavaScript

Basics of JavaScript

JavaScript adds interactivity and dynamic features to your website. It can manipulate HTML and CSS, respond to user events, and communicate with servers.

1. **Variables and Data Types:** Use var, let, const to store data.
2. **Functions:** Encapsulate code into reusable blocks.
3. **Event Listeners:** Respond to clicks, hover, form submissions, etc.

DOM Manipulation

JavaScript interacts with the Document Object Model (DOM) to dynamically change webpage content.

1. Use document.querySelector() and document.getElementById() to select elements.
2. Change styles, content, and attributes dynamically.

Advanced JavaScript Concepts

- Asynchronous programming with promises and async/await. - Working with APIs to fetch data. - Using JavaScript libraries and frameworks like React, Vue, or Angular for complex projects.

Building Your First Web Page

Start by creating a simple webpage that includes:
