Common Python Interview Questions on Mettl

The following sections highlight typical questions asked during Mettl assessments, categorized based on difficulty and topic.

Basic Python Questions

1. What are Python's key features? - Easy to read and write - Interpreted language - Dynamically typed - Supports multiple paradigms (procedural, object-oriented, functional) - Extensive standard libraries

2. Explain Python data types with examples.

- Numeric types: ``int``, ``float``, ``complex`` - Sequence types: ``list``, ``tuple``, ``range`` - Text type: ``str`` - Mapping type: ``dict`` - Set types: ``set``, ``frozenset`` - Boolean: ``bool``

3. How does Python handle memory management? - Python uses an automatic garbage collector for memory management.

- Memory is allocated dynamically for objects and deallocated when no longer in use.

4. What are Python functions? How are they defined? - Functions are blocks of reusable code. - Defined using the ``def`` keyword: `def`

```
greet(name): return f"Hello, {name}"
```

Intermediate Python Questions

1. **Explain list comprehensions with examples.** - Concise way to create lists: `squares = [x2 for x in range(10)]` - Enhances code readability and efficiency. 2. **What is the difference between `deepcopy` and `copy`?** - `copy()` creates a shallow copy; nested objects are references. - `deepcopy()` creates a new object and recursively copies nested objects. 3. **Describe Python's exception handling mechanism.** - Uses `try`, `except`, `else`, and `finally` blocks. - Example: `try: result = 10 / 0 except ZeroDivisionError: print("Cannot divide by zero")` 4. **What are Python decorators?** - Functions that modify the behavior of other functions. - Syntax: `def decorator(func): def wrapper(): print("Before function call") func() print("After function call") return wrapper`

Advanced Python Questions

1. **Explain Python generators and their advantages.** - Generators produce items lazily, saving memory. - Created using `yield`: `def count_up_to(n): count = 1 while count <= n: yield count count += 1` 2. **Discuss Python's GIL (Global Interpreter Lock) and its impact on concurrency.** - GIL allows only one thread to execute Python bytecode at a time. - Limits true parallelism in multi-threaded programs, affecting CPU-bound tasks. - Multi-processing can be used to achieve parallelism. 3. **What are metaclasses in Python? Provide a use case.** - Metaclasses define how classes behave. - Used for class customization, validation, or automatic method addition. - Example: `class Meta(type): def __new__(cls, name, bases, dct): dct['created_by'] = 'MetaClass' return super().__new__(cls, name, bases, dct) class MyClass(metaclass=Meta): pass` 4. **Describe the concept of**

Python's context managers and the `with` statement. -

Context managers handle setup and teardown actions. - The `with` statement simplifies resource management: with open('file.txt', 'r') as file: data = file.read()

Password protection is commonly used to limit access to sensitive documents. Setting strong, unique passwords reduces the risk of unauthorized viewing. However, passwords should be managed carefully to avoid locking out intended users or creating unnecessary barriers.

Balancing security and usability

While security is important, excessive restrictions can negatively impact user experience. Overly strict settings may prevent legitimate users from reading, printing, or annotating documents. When distributing Python Interview Questions Programming Mettl, it is important to balance protection with accessibility based on the

document's purpose and audience.

For public educational or informational materials, lighter security settings may be more appropriate. For confidential or proprietary content, stronger restrictions help reduce misuse and unauthorized distribution.

Removing hidden metadata, comments, or revision history helps prevent accidental disclosure. When handling Python Interview Questions Programming Mettl, ensuring that only intended information is included improves data security.

Redaction tools provide a secure way to permanently remove sensitive text or images. Proper redaction ensures that removed information cannot be recovered, unlike simple visual masking techniques.

Digital signatures and document authenticity

Digital signatures help verify document authenticity and integrity. A signed PDF confirms that the content has not been altered since signing and identifies the signer. Applying digital signatures to Python Interview Questions Programming Mettl adds a layer of trust, especially for official or legal documents.

Digital signatures are widely used in contracts, certifications, and formal documentation. They help recipients verify that the document is legitimate and originates from a trusted source.

Copyright basics for PDF documents

Copyright law protects original works, including text, images, and

designs found in PDF documents. When creating or distributing Python Interview Questions Programming Mettl, it is important to understand who owns the rights and how the content may be used. Copyright applies automatically upon creation, even if no explicit notice is included.

Using copyrighted material without permission may result in legal consequences. This includes copying, redistributing, or modifying content beyond permitted use. Understanding copyright boundaries helps prevent unintentional violations.
