Fundamental Concepts in ASHRAE Load Calculation

Heat Balance Approach

At the core of ASHRAE's methodology is the heat balance approach, which involves assessing all heat gains and losses to and from the space. This includes:

1. External heat gains (solar radiation, outdoor air temperature)
2. Internal heat gains (occupants, equipment, lighting)
3. Heat transfer through building envelope (walls, windows, roof)
4. Ventilation and infiltration effects

The Zone Concept

The building space is divided into thermal zones with similar characteristics, simplifying calculations and

allowing for tailored HVAC design for each zone.

Design Conditions

The calculations are based on design outdoor conditions (peak summer and winter temperatures) and indoor comfort criteria (temperature, humidity, air quality).
