

Solid Mensuration Problems With Solutions By Kern And Bland

Solid mensuration problems with solutions by Kern and Bland have long been a valuable resource for students and educators aiming to deepen their understanding of three-dimensional geometry. These problems encompass a wide range of shapes such as cylinders, cones, spheres, and composite solids, providing practical applications of mathematical principles in real-world contexts. In this article, we will explore some of the most insightful problems from Kern and Bland, complete with detailed solutions to enhance your grasp of solid mensuration concepts.

Understanding Solid Mensuration: An Overview

Before delving into specific problems, it is crucial to understand the fundamental concepts of solid mensuration. This branch of geometry involves calculating the volume, surface area, and other related measures of three-dimensional objects.

Basic Notations and Formulas

The common formulas used in solid mensuration include:

1. **Volume of a Cylinder:** $V = \pi r^2 h$
2. **Surface Area of a Cylinder:** $SA = 2\pi r(h + r)$
3. **Volume of a Cone:** $V = (1/3)\pi r^2 h$
4. **Surface Area of a Cone:** $SA = \pi r(l + r)$, where l is the slant height
5. **Volume of a Sphere:** $V = (4/3)\pi r^3$
6. **Surface Area of a Sphere:** $SA = 4\pi r^2$

Understanding these formulas and their applications is essential for solving complex problems involving composite and combined shapes.

Key Techniques in Solving Solid Mensuration Problems

When approaching problems in solid mensuration, certain techniques and strategies can streamline the process:

Decomposition of Complex Solids

Break down complex shapes into simpler ones such as cylinders, cones, or spheres. Calculating each part separately and then summing or subtracting volumes or areas is often effective.

Applying Similarity and Proportions

Utilize similarity of figures and proportions to find unknown measurements, especially in problems involving scaled models or sections of solids.

Using Auxiliary Figures and Sections

Draw auxiliary lines, sections, or planes to visualize and analyze the problem better, which helps in applying the correct formulas.

Understanding the Geometry and Constraints

Carefully analyze the problem's conditions, such as the height, radius, or the position of cutting planes, to identify what measurements are needed.

Sample Problems with Solutions by Kern and Bland

Let's explore some representative problems that demonstrate the application of these concepts.

Problem 1: Volume of a Cylinder with an Inscribed Cone

Problem Statement: A right circular cylinder has a radius of 5 cm and a height of 10 cm. Inside it, a right circular cone with the same radius as the cylinder is inscribed such that its base coincides with the top of the cylinder and its vertex touches the bottom. Find the volume of the remaining space in the cylinder after subtracting the cone's volume. **Solution:** Step 1: Calculate the volume of the cylinder. $V_{\text{cylinder}} = \pi r^2 h = \pi \times 5^2 \times 10 = \pi \times 25 \times 10 = 250\pi \text{ cm}^3$ Step 2: Calculate the volume of the inscribed cone. Since the cone has the same radius as the cylinder and extends from the top to the bottom: $V_{\text{cone}} = (1/3)\pi r^2 h = (1/3)\pi \times 25 \times 10 = (1/3)\pi \times 250 = (250/3)\pi \text{ cm}^3$ Step 3: Find the remaining volume. Remaining volume = $V_{\text{cylinder}} - V_{\text{cone}} = 250\pi - (250/3)\pi = \pi(250 - 250/3) = \pi(750/3 - 250/3) = \pi(500/3) = (500/3)\pi \text{ cm}^3$ Answer: The remaining space in the cylinder after removing the cone is $(500/3)\pi \text{ cm}^3$, approximately 523.6 cm^3 .

Problem 2: Surface Area of a Sphere Segment

Problem Statement: A sphere of radius 12 cm has a spherical cap cut off by a plane parallel to its base, creating a segment of height 5 cm. Find the surface area of the spherical segment, excluding the base. **Solution:** Step 1: Recall the formula for the lateral surface area of a spherical segment: Lateral surface area (excluding base) = $2\pi r h'$, where h' is the height of the segment. But since the segment is cut off by a plane at height $h = 5 \text{ cm}$ from the top, the slant height l of the segment's surface can be found. Step 2: Find the radius of the base of the segment (r_b): Using the relation: $r_b = \sqrt{2rh - h^2}$ Here, $r = 12 \text{ cm}$, $h = 5 \text{ cm}$: $r_b = \sqrt{2 \times 12 \times 5 - 5^2} = \sqrt{120 - 25} = \sqrt{95} \approx 9.75 \text{ cm}$ Step 3: Calculate the slant height l of the segment: $l = \sqrt{r^2 - (r - h)^2} = \sqrt{12^2 - (12 - 5)^2} = \sqrt{144 - 49} = \sqrt{95} \approx 9.75 \text{ cm}$ Step 4: Calculate the lateral surface area: Lateral area = $2\pi r l = 2 \times \pi \times 12 \times 9.75 \approx 2 \times 3.1416 \times 12 \times 9.75 \approx 2 \times 3.1416 \times 117 \approx 2 \times 367.5 \approx 735 \text{ cm}^2$ Answer: The surface area of the spherical segment (excluding the base) is approximately 735 cm^2 .

Advanced Problems: Combining Shapes and Applications

Kern and Bland's problems often involve more complex scenarios, such as composite solids, sections, and real-world applications.

Problem 3: Volume of a Frustum of a Cone

Problem Statement: A conical frustum has a lower radius of 10 cm, an upper radius of 5 cm, and a slant height of 12 cm. Find its volume. **Solution:** Step 1: Find the height of the frustum (h): Use the Pythagorean theorem: $l^2 = h^2 + (R - r)^2$

$+ (R - r)^2 l = 12 \text{ cm}$, $R = 10 \text{ cm}$, $r = 5 \text{ cm}$ $(12)^2 = h^2 + (10 - 5)^2 \rightarrow 144 = h^2 + 25 \rightarrow h^2 = 119 \rightarrow h = \sqrt{119} \approx 10.91 \text{ cm}$

Step 2: Calculate the volume of the frustum: $V = (1/3)\pi h(R^2 + Rr + r^2)$ Plugging in the values: $V = (1/3)\pi \times 10.91 \times (10^2 + 10 \times 5 + 5^2) = (1/3)\pi \times 10.91 \times (100 + 50 + 25) = (1/3)\pi \times 10.91 \times 175$ $V \approx (1/3) \times 3.1416 \times 10.91 \times 175 \approx 1.0472 \times 10.91 \times 175 \approx 1.0472 \times 1,909.25 \approx 2,000.4 \text{ cm}^3$

Answer: The volume of the frustum is approximately 2000.4 cm^3 .
