Core Concepts and Definitions

Basic Nutritional Terms

A foundational understanding of core terms is vital for anyone involved in nutrition sciences:

1. **Nutrient:** A substance obtained from food that is vital for growth, energy, and maintenance of bodily functions.
2. **Dietary Reference Intakes (DRIs):** A set of reference values used to plan and assess nutrient intakes of healthy populations.
3. **Macronutrients:** Nutrients required in large amounts, including carbohydrates, proteins, and fats.
4. **Micronutrients:** Nutrients needed in smaller quantities, such as vitamins and minerals.
5. **Dietary Fiber:** The indigestible part of plant foods that aids digestion and has health benefits.

Dietary Components and Food Groups

Understanding food classifications helps in dietary planning and nutritional assessment:

1. **Food Groups:** Categories like fruits, vegetables, grains, protein foods, and dairy products.
2. **Energy-yielding nutrients:** Carbohydrates, fats, and proteins that provide calories.
3. **Phytochemicals:** Bioactive non-nutrient compounds in plants with health-promoting properties.

Standardized Classifications and Coding Systems

To facilitate international communication, several classification and coding systems are employed:

International Food Classification Systems

These systems standardize how foods are categorized and described:

1. **The International Standard Classification of Food (ISCF):** Developed by the Food and Agriculture Organization (FAO), it categorizes foods for global data collection.
