Sample Questions and Detailed Answers from NBME Surgery Form 2

Question 1: Emergency Management of Blunt Abdominal Trauma

Scenario: A 35-year-old male presents after a motor vehicle collision with abdominal pain, hypotension, and tachycardia. On examination, there is tenderness in the right upper quadrant. Question: What is the next best step in management? Answer: Immediate assessment with focused assessment with sonography for trauma (FAST) ultrasound, followed by surgical intervention if indicated. Explanation: - The patient shows signs of hypovolemic shock likely due to intra-abdominal injury. -

FAST ultrasound helps rapidly identify free fluid (blood) in the abdomen. - If FAST is positive and the patient is unstable, prompt surgical exploration (laparotomy) is indicated. - In stable patients, further imaging like CT scan may be performed.

Question 2: Management of Appendicitis

Scenario: A 22-year-old woman presents with right lower quadrant pain, nausea, and low-grade fever. Question: What is the most appropriate initial management?

Answer: Surgical consultation for appendectomy, with preoperative antibiotics. Explanation: - Clinical presentation suggests acute appendicitis. - The standard treatment is surgical removal of the appendix. - Antibiotics are administered preoperatively to reduce infection risk. - Imaging (ultrasound or CT) can confirm diagnosis but should not delay surgery if clinical suspicion is high.

Question 3: Postoperative Wound Infection Prevention

Scenario: A patient undergoes elective colorectal surgery. Postoperatively, the wound shows signs of infection.

Question: What measures can reduce the risk of surgical wound infection? Answer: - Proper skin antisepsis before

incision. - Use of prophylactic antibiotics within one hour before incision. - Maintaining normothermia during surgery. - Adequate blood glucose control, especially in diabetics. - Minimizing operative time and tissue trauma. - Proper wound closure techniques. Explanation: Adherence to infection control protocols significantly reduces postoperative wound infections.
