The Periodic Table: An Overview What Is the Periodic Table? The periodic table is an organized chart that arranges all known chemical elements based on their atomic number, electron configurations, and recurring chemical properties. It provides a systematic way to understand relationships among elements.

Structure of the Periodic Table The table consists of:

- Periods: Horizontal rows (1 to 7) representing energy levels
- Groups: Vertical columns (1 to 18) sharing similar chemical characteristics
- Blocks: Subdivisions based on electron configurations (s-block, p-block, d-block, f-block)

Key Sections of the Table

- Metals: Found on the left and center; good conductors of heat and electricity
- Nonmetals: Located on the right; often insulators
- Metalloids: Borderline elements with mixed properties

Understanding these structural features helps learners predict element behavior and properties.
