Overview of Gina Wilson All Things Algebra Unit 3

What is Covered in Unit 3?

Gina Wilson's Unit 3 generally encompasses the following key areas:

1. Solving linear equations and inequalities
2. Graphing linear functions and inequalities
3. Understanding systems of equations

4. Exploring functions and their properties
5. Applying algebraic methods to real-world problems

Importance of Mastering Unit 3 Topics

Mastery of these topics is crucial because they:

1. Form the foundation for advanced algebra and other math courses
2. Enhance problem-solving and critical thinking skills
3. Enable students to interpret and analyze data effectively
4. Prepare students for standardized assessments and exams

Solving Linear Equations and Inequalities

Fundamental Concepts

Linear equations are algebraic expressions that represent straight lines when graphed. They are typically written in the form:

$$ax + b = 0$$

where a and b are constants, and x is the variable.

Key steps in solving linear equations include:

1. Isolating the variable
2. Maintaining equality by performing the same operation on both sides
3. Checking solutions by substitution

Techniques for Solving Inequalities

Inequalities are similar to equations but involve symbols such as $>$, $<$, $\geq$, and $\leq$. Solving inequalities involves similar steps to equations, with attention to the

direction of the inequality when multiplying or dividing by negative numbers.

Important points:

1. When multiplying or dividing both sides by a negative number, reverse the inequality sign.
2. Graph solutions on a number line to visualize the solution set.

Practical Applications

Students can practice solving equations and inequalities through real-world scenarios, such as budgeting, speed-time problems, or determining feasible ranges for variables.

Graphing Linear Functions and Inequalities

Understanding Graphs of Linear Equations

The graph of a linear equation is a straight line characterized by its slope and y-intercept.

Form:

$$y = mx + b$$

1. m : slope (rate of change)
2. b : y-intercept (point where the line crosses the y-axis)

Graphing Techniques

1. Plot the y-intercept.
2. Use the slope to find another point.
3. Draw the line through these points.
4. For inequalities, shade the region that satisfies the inequality.

Graphing Linear Inequalities

1. For inequalities like $y > 2x + 1$, draw the boundary line (dashed for strict inequalities, solid for inclusive).
2. Shade the area above or below the line based on the inequality.

System of Equations

Solving Systems

A system of equations involves two or more equations with the same variables. Solutions are the points where the graphs intersect.

Methods:

1. Substitution
2. Elimination
3. Graphical method

Applications and Problem Solving

Systems are useful in real-world contexts such as determining break-even points, mixing solutions, or optimizing resources.

Functions and Their Properties

Defining Functions

A function relates an input to exactly one output. It is often represented as:

$$f(x) = \text{expression}$$

Key Concepts

1. Domain and range

2. Function notation
3. Evaluating functions
4. Identifying linear, quadratic, and other types of functions

Function Transformations

1. Shifts, stretches, or compressions of the graph
2. Reflection over axes
